Professional Summary

Motivated Backend Developer with hands-on experience building RESTful APIs, JWT-based authentication, and scalable backend systems using Python and Django. Proficient in Django REST Framework, PostgreSQL, database design, and query optimization via Django ORM. Delivered a full-stack legal platform (Book My Advocate) and a published deep learning project, demonstrating ability to ship production-ready applications independently. Seeking to contribute strong backend fundamentals and a fast-learning mindset to a growth-driven engineering team.

Education

M.S. Ramaiah University of Applied Sciences

Jan 2022 – Jun 2024

B.Tech in Computer Science and Engineering

CGPA: 7.05 / 10

P.V.P Polytechnic

Jul 2018 – Nov 2021

Diploma in Information Science Engineering

Percentage: 73%

Projects

Book My Advocate – Full Stack Legal Appointment Platform

Jan 2026 - March 2026

Python, Django, Django REST Framework, REST APIs, JWT Authentication, PostgreSQL, Git, Postman

- Engineered a scalable full-stack legal platform using Django handling advocate search, appointment booking, and case management for multiple concurrent user roles.
- Designed and tested 15+ RESTful API endpoints using Django REST Framework and Postman, reducing client-server response time by approximately 30%.
- Implemented JWT-based authentication and role-based access control (RBAC) securing 3 distinct user roles (client, advocate, admin).
- Optimized PostgreSQL queries using Django ORM, improving data retrieval efficiency by approximately 25% through indexing and query restructuring.
- Architected modular backend with reusable Django apps, reducing code duplication and improving maintainability across 5+ modules.

Arecanut Status Detection using Deep Learning

Jan 2024 - May 2024

Python, TensorFlow, OpenCV, Scikit-learn, NumPy, CNN, SVM

- Built a real-time image classification system using CNN with TensorFlow and OpenCV, achieving 85%+ accuracy on custom agricultural dataset.
- Collected and preprocessed 1,000+ images across 4 arecanut disease categories, improving model robustness under varying lighting and environmental conditions.
- Benchmarked SVM vs CNN models — SVM achieved 75% accuracy while CNN outperformed by 10%+ after hyperparameter tuning.
- Reduced model inference latency by approximately 20% through architecture optimization, enabling real-time deployment on edge devices.
- Applied data augmentation techniques (rotation, flipping, brightness adjustment) on training set, increasing dataset size by 3x and reducing overfitting.

Technical Skills

Languages: Python, SQL

Frameworks: Django, Django REST Framework, REST APIs

Databases: PostgreSQL, SQLite, Django ORM

Tools: Git, GitHub, Postman, VS Code, Linux

Backend: JWT Authentication, Role-Based Access Control (RBAC), API Development, API Versioning, Database Design

Testing & Docs: Pytest, Swagger/OpenAPI (basic)

ML Libraries: TensorFlow, OpenCV, Scikit-learn, NumPy

Concepts: OOP, MVC Architecture, Modular Design, Data Structures, Algorithms, RESTful Design Principles

Publications & Achievements

Research Publication – IJIRE: Arecanut Status Detection Using Deep Learning, International Journal of Innovative Research in Advanced Engineering.	May 2024
Hackathon Achievement – Ramaiah University: Developed Intelligent Chess Coaching System, presented at IIC Ramaiah University Hackathon.	Nov 2023
